### Elgin Area Primary Water Supply System –2023 3<sup>rd</sup> Quarter Water Quality Report

There were no adverse test results for the Elgin Area Primary Water Supply System during this quarter.

#### **List of Acronyms:**

MAC – Maximum Acceptable Concentration; as identified in O.Reg. 169 (Ontario Drinking-Water Quality Standards)

IMAC - Interim Maximum Acceptable Concentration; as identified in the Technical Support Document for Ontario Drinking Water Standards, Objectives and Guidelines

AO/OG – Aesthetic Objective/Operational Guideline; as identified in the Technical Support Document for Ontario Drinking Water Standards, Objectives and Guidelines

NT - Not Tested

NR - Not Required

ND - Not Detected

# Analytical Test Results: (All values are reported in mg/L unless otherwise noted; All results are for treated water leaving the Water Treatment Plant unless otherwise noted)

#### Microbiological Parameters (Required Testing Under O.Reg. 170/03):

| Microbiological<br>Parameter                 | MAC or IMAC    | No. of<br>Samples | No. of<br>Detectable<br>Results | No. of<br>Adverse<br>Results | Method                 | Sampling<br>Date | Min.<br>Result | Max.<br>Result | Comments   |
|--|----------------|-------------------|---------------------------------|------------------------------|------------------------|------------------|----------------|----------------|--|
| Total Coliform (counts/100ml) i              | Not Detectable | 53                | 0                               | 0                            | Membrane<br>Filtration | July-Sept        | 0              | 0              | Parameter sampled is used to test for the possible presence of fecal matter. Zero detectable test results indicates that Total Coliforms were not detected.          |
| E. Coli<br>(counts/100ml) ii                 | Not Detectable | 53                | 0                               | 0                            | Membrane<br>Filtration | July-Sept        | 0              | 0              | Parameter sampled is used to test for the possible presence of fecal matter. Zero detectable test results indicates that E.Coli was not detected.                    |
| Heterotrophic<br>Plate Count<br>(counts/1ml) | N/A            | 53                | 8                               | 0                            | Spread<br>Plate Count  | July-Sept        | <10            | 20             | Test parameter is used as an indicator of possible deterioration of water quality. Increases in HPC concentrations above baseline levels are considered undesirable. |

# **Operational Parameters:**

| Operational<br>Parameter                            | MAC<br>or<br>IMAC | Objective<br>AO/OG | No. of Samples   | Sampling<br>Date | Min. Result | Max. Result | Avg. Result | Comments   |
|---|-------------------|--------------------|--|------------------|-------------|-------------|-------------|--|
| Chlorine<br>Residual, Free<br>(mg/L) <sup>iii</sup> |                   |                    | Continuous<br>monitoring plus 6<br>grab samples per<br>day | July-Sept        | 0.77        | 1.63        | 1.20        | The maintenance of an adequate free chlorine residual is essential to the protection of public health. Values reported are an average of the 6 daily grab samples. The regulated minimum for free chlorine residual concentration in a water distribution system is 0.05mg/L; however the contractual obligation of the water system is to achieve 0.5mg/L at the point of supply to the municipalities. |
| Chlorine<br>Residual, Total<br>(mg/L) <sup>iv</sup> |                   |                    | Continuous<br>monitoring plus 2<br>grab samples per<br>day | July-Sept        | 0.99        | 1.83        | 1.37        | The maintenance of an adequate free chlorine residual in essential to the protection of public health. Values reported are an average of the 2 daily grab samples.   |
| Colour<br>(TCU)                                     |                   | 5                  | 2 grab samples per<br>day                                  | July-Sept        | <3          | <3          | <3          | Values reported are an average of the 2 daily grab samples.  |
| Conductivity (µS/cm)                                |                   |                    | Continuous<br>monitoring plus 2<br>grab samples per<br>day | July-Sept        | 169.54      | 337.11      | 276.20      | Raw Water Conductivity. Values reported based on daily minimum, maximum and average that have been recorded electronically   |
| рН  |                   | 6.5 – 8.5          | Continuous<br>monitoring plus 6<br>grab samples per<br>day | July-Sept        | 6.99        | 7.77        | 7.50        | Values reported are an average of the 6 daily grab samples.  |
| Turbidity<br>(NTU) <sup>v vi</sup>                  |                   |                    | Continuous<br>monitoring plus 6<br>grab samples per<br>day | July-Sept        | 0.019       | 0.196       | 0.059       | Turbidity (cloudiness) of water is an indication of the presence of particles in the water. If excessive, it may interfere with proper disinfection. Values reported are an average of the 6 daily grab samples.   |

| Operational Parameter             | MAC<br>or<br>IMAC | Objective<br>AO/OG | No. of Samples   | Sampling<br>Date | Min. Result | Max. Result | Avg. Result | Comments  |
|-----------------------------------|-------------------|--------------------|--|------------------|-------------|-------------|-------------|---|
| Fluoride<br>(mg/L) <sup>vii</sup> | 1.5               | 0.6 – 0.8          | Continuous<br>monitoring plus 2<br>grab samples per<br>day | July-Sept        | 0.43        | 0.80        | 0.65        | Naturally occurring fluoride levels are supplemented during treatment to achieve the optimum level of 0.7mg/L recommended by Health Canada. The Ministry of Health and Long-Term Care's document "Safe Drinking Water and Fluoride Monitoring Protocol, 2018" recommends a therapeutic range of 0.6 - 0.8 mg/L for fluoride.  Values reported are an average of the 2 daily grab samples. |
| Aluminum<br>(mg/L)                |                   | <0.1               | 2 grab samples per<br>day                                  | July-Sept        | 0.005       | 0.041       | 0.021       | Filtered Water Aluminum. Aluminum levels are slightly elevated during treatment as a result of the use of alum to help in the removal of particulates.  |
| Temperature<br>(Celsius)          |                   | 15                 | Continuous<br>monitoring plus 6<br>grab samples per<br>day | July-Sept        | 14.04       | 22.69       | 19.40       | Values reported are an average of the 6 daily grab samples.   |

## Inorganic Parameters (Required Testing Under O.Reg. 170/03 – Schedule 23):

| Schedule 23 - Inorganic<br>Parameter | MAC or IMAC<br>(mg/L) | Objective<br>AO/OG | O.Reg. 170/03 Required Frequency of Testing (months) | Q4 2022 | Q1 2023  | Q2 2023 | Q3 2023  | Reportable<br>Detection<br>Limit (mg/L) | Comments |
|--------------------------------------|-----------------------|--------------------|--|---------|----------|---------|----------|---|----------|
| Antimony                             | 0.006                 |                    | 12   | NT      | ND       | NT      | ND       | 0.0006                                  |          |

i Indicator of adverse water quality

ii Indicator of adverse water quality

iii In addition to the analytical samples noted, free chlorine residual is also measured on a continuous basis at the treatment facility using on-line instrumentation.

iv In addition to the analytical samples noted, total chlorine residual is also measured on a continuous basis at the treatment facility using on-line instrumentation.

<sup>&</sup>lt;sup>v</sup> In addition to the analytical samples noted, turbidity is also measured on a continuous basis at the treatment facility using on-line instrumentation.

vi Turbidity is both regulated by the Province of Ontario, and specified in accordance with the operating agreement with the Contracted Operating Authority. The turbidity reported (6 daily grab samples) is taken from the plant treated water discharge, which is not explicitly regulated in Provincial Regulations. Provincial Standards recommend an aesthetic objective of 5 NTU within a distribution system, and Provincial Regulation specifies a maximum of 1 NTU on individual filter effluent. The contract with the Operating Authority specifies a maximum turbidity of 0.2 NTU on treated water discharge from the water treatment plant and 0.1 NTU on individual filter effluent. There is currently no standard for combined filter effluent.

vii In addition to the analytical samples noted, fluoride is also measured on a continuous basis at the treatment facility using on-line instrumentation.
